

Flock Safety

Positives:

Tracks vehicles that may damage roads, possibly oversized vehicles.

Stolen camera free the first time, \$300 after.

Has built in health monitoring (72 hours guaranteed to come out).

Great search features, will free up time for Karen and others to review video. A major incident information could be supplied very quickly compared to other systems. Date/time stamp of vehicle and information. Can track number of vehicles in the search grid you choose.

No added cost for relocation and fixing the system.

Yearly cost would be roughly same amount we are currently paying per year, but we would save the \$30,000 that the other system would cost.

Would not have to continue to buy a new system with outdated cameras in the future. They would provide new cameras if there is an updated camera system.

We could by some time until technology continues to advance on camera systems.

When the power goes out we will still have footage. 15 day internal storage and solar battery backup powered.

Negatives:

May not capture both sides gates, could place mirrors to capture the full portion of the gates.

No trial period, but can cancel anytime for \$500 per camera and prorated remaining for the year.

Will not come out for pre contract visit, site visit would be \$250.

NCIC database that we could opt out of.

Sonitrol:

Positives:

Would show video of the gates and a better overall view

Would continue service and maintain system.

Negatives:

Reviewing the data takes time and does not track

The power goes out and the system does not work.

The cost of a new system and down the road we would again have to purchase new cameras and systems.

Their search feature is dated and they use a third party for reviewing the video footage.
